General Summary for Tuesday, 24 November, 2026

British Mountain Summary:
Based on forecast chart for noon 24 November, 2026

Southeasterly gales over most mountains, powerful gusts toward some lower elevations. Hill snow fairly persistent for the southern Highlands, rain lower slopes; patchier northwards across the Highlands. Some hill snow for northern England, turning more to rain. Heavy rain toward west Wales.

Headline for Eryri / Snowdonia National Park

Heavy rain west; powerful gales.

Detailed Forecast for Tuesday, 24 November, 2026

How windy? (On the summits)	South to southeasterly, strengthening quickly with height, a very gusty 45-65mph. Ferocious gusts; some reaching valleys. Speeds lowering onward into evening.
Effect of wind on you?	**Severe wind chill and very difficult walking where exposed. Gusts may well knock you over - even on some lower slopes.**
How wet? (Precipitation and its impact)	**Rain most or all day, heaviest west** A broad area of rain will last throughout the day, heaviest sustained falls over western mountains near and on the Llyn peninsula. May tend to fade out from eastern hills during the afternoon.
Cloud on the hills?	**Extensive, higher north** Cloud base extensively 300-500m, but mostly 600m Snowdon range northward, local breaks on some upper slopes.
Chance of cloud free summits?	**20%**
Sunshine? Air clarity (below cloud)	Generally cloudy, rare brighter moments in northernmost areas. Widely misty or murky.
How Cold? (at 900m)	2 or 3C, may rise slightly higher. Will feel as cold as minus 12C in the wind.
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Wednesday 25 November	Thursday 26 November
How windy? (On the summits)	Easterly 20 to 30mph, gusts may increase further around higher tops and some western downslopes.	Southeasterly 20 to 30mph, may strengthen further during day, gusts 40mph possible around some high northern tops.
Effect of wind on you?	**Starting to affect ease of walking on exposed terrain with considerable wind chill, increasingly gusty not just on tops.**	**Affecting comfortable walking on high terrain, increasingly strenuous with some buffeting gusts. Considerable wind chill.**
How wet? (Precipitation and its impact)	**Some early sleet, fading** Remnants of overnight sleet, snow tops, may continue on some hills in the morning, rain lower slopes. Tending to fade to become patchy, odd brief flurries in east.	**Dry all day** Into night, risk of hill snow developing from the west.
Cloud on the hills?	**Mostly east, clearer west** Varying cloud banks across many hills in the morning, may persist over eastern hills, but tending to thin westwards and good breaks west coast and Llyn peninsula.	**Mostly little** Some patchy cloud banks may drift onto slopes mainly in east and mid-Wales, very little toward the north and northwest.
Chance of cloud free summits?	**50%**	**70%**
Sunshine? Air clarity (below cloud)	Little if any weak sun due to layers of high cloud. Visibility very good where dry, poorer in early sleet/snow.	Sun likely to weaken as a veil of high cloud thickens from the west. Visibility good, some haze possible.
How Cold? (at 900m)	0 to 2C, small change with height above around 500m; slightly warmer west. Feeling near -10C if in stronger wind.	-1C, small change with height 600m up. Feeling like -7 to -10C on high terrain.
Freezing Level	Poorly defined with much upland terrain partly frozen above 500m, but also slight frost mainly inland valleys in morning.	Much terrain frozen, thawing only on sunlit lower slopes up to 500m.

Planning Outlook

All mountain areas of Britain from Wednesday, 25 November, 2026

Staying near or below freezing across most mountains all this week with below-average temperatures for late November, much higher terrain persistently frozen and regular frosts into valleys and glens. Strong east or southeasterly winds prevail, gales at times. Largely dry midweek, some snow flurries mostly eastern hills. Further hill snow more widely into Friday may set in heavy as a front moves in from the west, rain lower western areas. In the extended outlook through the weekend and beyond, there is uncertainty about the extent of incoming Atlantic fronts and scope for further snowfalls , or any pushes of milder air trying to arrive.

Forecast issued at 16:15 on Monday, 23 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
