General Summary for Sunday, 7 August, 2022

British Mountain Summary:

Based on forecast chart for noon 7 August, 2022

Generally damp and murky across western Scotland, extensive fog from low elevations upward. Drizzly rain pushing northwards with lowering cloud bases. Largely dry eastern Highlands. Mostly dry northern England, some cloud banks on Lakeland tops. Widely breezy on hills. Sunny and warm for Wales and Peaks, lighter winds.

Headline for Southeastern Highlands

Drizzly rain, low cloud central highlands; mainly dry east. Breezy.

Detailed Forecast for Sunday, 7 August, 2022

How windy? (On the Munros)	Westerly, 15 to 25mph, at times 30mph on higher summits, particularly near the central belt. For a few hours around dawn 35-40mph on higher summits.
Effect of wind on you?	Blustery on higher terrain, likely to impede ease of walking where exposed on the Munros, very gusty in places. Feeling chilly.
How wet? (Precipitation and its impact)	Drizzly toward central highlands, dry toward east. Patchy drizzly rain focused on areas around the Trossachs toward Loch Rannoch, amounts fairly small, but may be damp for several hours. Otherwise, rare drizzly showers, but east from the A9 generally dry.
Cloud on the hills?	Fairly extensive west, little toward east. Low cloud focused toward the west of the A9 in the morning, covering tops above 600 to 800m, or filling in lower for Ochils and Callander area in drizzly rain where fairly persistent all day. Toward east of the A9, tops more often clear, but expect some banks of cloud over the Munros at times.
Chance of cloud free Munros?	20% west/south, 70% easternmost tops.
Sunshine? Air clarity (below cloud)	Mostly cloudy, glimpses of sun mainly toward and east of Glenshee. Visibility good below cloud, very good east, but mistier in central highlands in drizzle.
How Cold? (at 900m)	9 to 12C, little change during day, warmest toward east, locally warmer some slopes by afternoon. Wind chill will make it feel close to freezing where exposed on high tops.
Freezing Level	Above the summits

Southeastern Highlands - Looking Ahead

	Monday 8 August	Tuesday 9 August
How windy? (On the Munros)	Southwesterly, 15 to 25mph, strongest on tops west of the A9.	Southwesterly, 15 to 25mph, perhaps later 35mph on higher tops.
Effect of wind on you?	Blustery over higher tops, may impede walking on exposed ridges.	Increasingly blustery, walking impeded across higher terrain, becoming gusty around some corries.
How wet? (Precipitation and its impact)	Rain not expected	Rain very unlikely Chance of a rare drizzly shower, mostly west of the A9.
Cloud on the hills?	Mostly clear Patchy mist or fragments of cloud around some slopes in the morning, but soon all dispersing.	Most hills clear Patchy cloud may drift onto some higher slopes in Perthshire occasionally, but most cloud above the mountains.
Chance of cloud free Munros?	90%	90%
Sunshine? Air clarity (below cloud)	Sunshine may weaken as thin high cloud spills in from west, plus a little fair-weather cloud building. Visibility excellent.	Sunshine and varied amounts of high cloud. Visibility excellent.
How Cold? (at 900m)	9 to 12C, warmest east from Glenshee.	12 to 15C, warmest eastern areas.
Freezing Level	Above the summits	Above the summits

Planning Outlook**All mountain areas of Britain from Monday, 8 August, 2022**

Southwesterly winds continue to influence Scotland. Rain or drizzle will be most frequent in the Northwest Highlands, where low cloud will often shroud coastal hills. Winds strengthening at times toward gale force on the tops, strongest later Tuesday. Further south and east across Scotland, it will be commonly dry with higher cloud bases, becoming warmer and more humid with time. High pressure extends across England and Wales, leading to a settled outlook for the week ahead here, generally dry with light winds, becoming increasingly warm or very warm, particularly in southern areas.

Forecast issued at 16:00 on Saturday, 6 August, 2022
