### General Summary for Monday, 23 June, 2025

#### British Mountain Summary:

#### Based on forecast chart for noon 23 June, 2025

Windy for all regions, gale-force westerlies on higher mountains. Much cooler air than recently, feeling distinctly chilly where exposed on hills. Showery rain most frequent western Scotland and cloud often capping tops. Light showers England & Wales, drier spells.

#### Headline for Southeastern Highlands

Chilly and windy, gales on high tops. Brief showers.

### Detailed Forecast for Monday, 23 June, 2025

<b>How windy? (On the Munros)</b>	Westerly 35 to 40mph, at times 45mph over higher tops, stronger gusts in places.
<b>Effect of wind on you?</b>	Frequent buffeting over higher terrain, making walking arduous where exposed, balance challenging on ridges. Considerable wind chill.
<b>How wet?</b> (Precipitation and its impact)	<b>Occasional light rain</b> Patchy light showers and drizzle mostly central highlands. Often dry toward and east of Glenshee.
<b>Cloud on the hills?</b>	<b>Mostly higher and western tops</b> Banks of cloud most common central highlands above 800-1000m; mostly above 1100-1200m further east with breaks.
<b>Chance of cloud free Munros?</b>	<b>40%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Fairly cloudy, occasional sun, more often toward east. Visibility very good below cloud.
<b>How Cold? (at 900m)</b>	3C from dawn, rising to 7C. Feeling like -5C in the wind on high tops, or colder in morning.
<b>Freezing Level</b>	Above the summits

## Southeastern Highlands - Looking Ahead

	<b>Tuesday 24 June</b>	<b>Wednesday 25 June</b>
<b>How windy? (On the Munros)</b>  <b>Effect of wind on you?</b>	West to southwesterly 20 to 30mph, strongest on higher summits toward the central belt risk 35mph.  <b>Starting to affect comfortable walking when walking on higher exposed terrain, some buffeting. Marked wind chill.</b>	Southwest then southerly, 15 to 20mph.  <b>Fairly small.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Rain for a time</b> Patchy rain and drizzle, may persist for a few hours central highlands, fading to drizzly showers; small amounts in east.	<b>Rain unlikely during daytime</b> Chance of an isolated drizzly shower. Into the night, rain likely to develop from the southwest.
<b>Cloud on the hills?</b>          <b>Chance of cloud free Munros?</b>	<b>Often covering higher areas</b>  Fairly persistent above 700-900m particularly central highlands, may rise a little. Some breaks higher up eastwards.  <b>30%</b>	<b>Lifting to higher tops, some breaks</b>  Covering many upper slopes in the morning, particularly central highlands, some breaks further east. Cloud base tending to rise, but may linger around tops even into afternoon, clearing for periods.  <b>50%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Mostly cloudy, glimpses of sun in east. Visibility good below cloud away from rain.	Glimpses of sun best toward east. Visibility good out of cloud.
<b>How Cold? (at 900m)</b>  <b>Freezing Level</b>	7C. Feeling sub-zero on high tops in the wind.  Above the summits	7C, rising up to 10C afternoon.  Above the summits

**Planning Outlook****All mountain areas of Britain from Tuesday, 24 June, 2025**

West to southwesterly winds prevail this week and a series of frontal systems come in from the Atlantic. Rain and drizzle most frequent in west with low cloud often covering hills. Higher cloud bases and drier further eastwards. Much cooler than recently, temperatures nearer average, or lower at times in Scotland. Often windy, but by later in the week, risk of more extensive upland gales and some heavier rain as deeper areas of low pressure likely move in.

**Forecast issued at 16:00 on Sunday, 22 June, 2025**
