General Summary for Wednesday, 12 November, 2025

British Mountain Summary:

Based on forecast chart for noon 12 November, 2025

Northern areas of the Highlands generally wet, the rain only gradually breaking up. Showers for the southwest Highlands. Dropping below freezing on northern tops later. Heavy rain sets in again across Wales, already flooding expected after previous rain. Mostly dry for much of Pennines, Lakes & south Scotland.

Headline for Southeastern Highlands

Windy in morning. Showery rain, fading for a time.

Detailed Forecast for Wednesday, 12 November, 2025

How windy? (On the Munros)	Southwesterly 25 to 35mph, strongest and most gusty in morning, tending to ease into afternoon, easing to 15-20mph up to dusk into early evening. Then into night switching northeasterly, reaching 40-50mph further into night.
Effect of wind on you?	Blustery conditions, marked wind chill in morning, frequent buffeting for a time. Tending to ease into afternoon, mostly small late in day. Deteriorating overnight.
How wet? (Precipitation and its impact)	Showers, some more frequent rain Very wet underfoot with streams in spate and flooding following previous rain. Showery rain on and off into the daytime, breaking up to become scattered middle of day, but later risk more frequent rain drifting back southwards across the region.
Cloud on the hills?	Fairly extensive Shrouding the mountains widely, banks of cloud at varied elevations, in places to some lower slopes. Higher bases and local breaks toward the south, best in afternoon.
Chance of cloud free Munros?	20%
Sunshine? Air clarity (below cloud)	Largely cloudy, a little weak sun may break through. Misty areas in morning, improving visibility, locally good in east.
How Cold? (at 900m)	4 or 5C early, a slight drop as the day goes, then to 0C into night. Feeling like -5C if in stronger wind.
Freezing Level	Above the summits, may drop close to highest tops late in day, then lowering further to 800-900m overnight.

All mountain areas of Britain from Thursday, 13 November, 2025

High rainfall totals bring concerns for flooding again, risk more significant in Wales in the days ahead. A marked contrast of temperature north to south this week, but colder air to the north becomes more widespread into the weekend and early next week, leaving higher terrain below freezing for a run of days and some accumulating snow, mostly focused over northern Scottish mountains. Wind will vary, then become east-northeasterlies, gales Friday into Saturday, then a possible brief lull before turning northerly on Sunday. More uncertain outlook further into next week, but some further unsettled areas of low pressure currently show signs of remaining nearby - but often within a colder weather regime.
