General Summary for Thursday, 13 November, 2025

British Mountain Summary:

Based on forecast chart for noon 13 November, 2025

Cold northeasterlies for the Highlands, gale-force over mountains early in day. Snow mostly in northern areas. A slow-moving swathe of rain for southern Scotland and northern England, heavy at times. Previous rain eases to patchy light rain in Wales, but beware of flooding - staying mild here.

Headline for Southeastern Highlands

Cold, upland gales, lessening. Early rain & hill snow then drier.

Detailed Forecast for Thursday, 13 November, 2025

How windy? (On the Munros)	Northeasterly 50mph, gusts 60mph in places, lessening gradually during day to 35mph; then 25mph into night.
Effect of wind on you?	Difficult conditions across the mountains, some improvement, but powerful gusts likely all day. Significant wind chill.
How wet? (Precipitation and its impact)	Rain and hill snow fading Fairly persistent rain and hill snow above 700-800m from before dawn into morning, locally heavier, but easing off and gradually becoming patchy, then drier with time for most places into afternoon.
Cloud on the hills?	Fairly extensive, slowly improving Shrouding most high ground from dawn, mostly above 800m but locally lower in east. Will tend to break into banks of cloud clinging to hills, perhaps briefly clearing tops, best breaks near Loch Tay afternoon.
Chance of cloud free Munros?	30%
Sunshine? Air clarity (below cloud)	Overcast, some bright breaks forming later in the day. Visibility variable: poor in snow/rain tending to improve.
How Cold? (at 900m)	0C, slightly lowering to -1C. Feeling like -15C in direct wind.
Freezing Level	800-900m.

All mountain areas of Britain from Friday, 14 November, 2025

High rainfall with significant flooding expected for Wales by the end of this week, risk flooding too in Peak District. Drier overall across the Highlands. Strong to gale force easterlies later this week, then northerlies are expected to dominate onward into next week. Colder air extends to all areas, staying below freezing over higher mountains most likely throughout next week to 10 days. Some accumulations of snow over Scottish mountains, initially mostly northern areas, possibly more widely across all mountain areas during next week - Tuesday-Wednesday in particular, but lower confidence of forecast detail by then.

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
