General Summary for Saturday, 22 November, 2025

British Mountain Summary:

Based on forecast chart for noon 22 November, 2025

As less cold air penetrates the UK, only higher summits in Scotland will remain below freezing point. Nevertheless, much mountains terrain will remain frozen and icy. Rain and strong winds overnight will have eased to in Scotland and through the morning will clear Wales and N England.

Headline for Southeastern Highlands

A few showers; mountains extensively foggy. Terrain mostly frozen.

Detailed Forecast for Saturday, 22 November, 2025

How windy? (On the Munros)	Westerly 20 to 25mph. Will tend to ease through the afternoon.
Effect of wind on you?	Mostly fairly small, although particularly in the morning still considerable wind chill where exposed.
How wet? (Precipitation and its impact)	Showery; snow confined above 900m A few showers west of A9 - very few and brief eastward toward and east of Glenshee.
Cloud on the hills?	Extensive - although some higher slopes may gradually clear Very varied; overall most mountains cloud covered, in some areas from valleys up. Nevertheless, particularly afternoon, breaks to higher slopes - sometimes above fog lower down.
Chance of cloud free Munros?	20%
Sunshine? Air clarity (below cloud)	Patches of sun coming through in places above fog, most widely east of the A9. Visibility varied, areas of fog (sometimes in or just above valleys), but otherwise very good.
How Cold? (at 900m)	1C. Feeling like -7C directly in the wind.
Freezing Level	1050m; but much terrain from valleys up frozen.

Southeastern Highlands - Looking Ahead

	Sunday 23 November	Monday 24 November
How windy? (On the Munros)	Easterly, speeds at present uncertain, but probably in the range 20 to 35mph.	Northerly, between 25 and 35mph.
Effect of wind on you?	Expect blustery conditions, perhaps considerable buffeting and wind chill over some mountains.	Walking often arduous, particularly near precipitation, where in gusty conditions, balance tricky.
How wet? (Precipitation and its impact)	Rain or hill snow on and off Precipitation intermittently or frequently throughout the day. Snow above 600-900m.	Snow and hail showers - mainly Angus Succession of hail and above 400m snow showers probably east of Glenshee. Few showers (only flurries) elsewhere.
Cloud on the hills?	Extensive across the mountains Persistent fog most mountains, widely above 400 to 600m, and sometimes covering lower slopes.	Extensively covering higher tops Angus; may clear elsewhere Near and east of Glenshee: Cloud base varying as showers come and go: typically 600m, but shafts of cloud below 400m near precipitation. Higher cloud base elsewhere, breaks to 1200m.
Chance of cloud free Munros?	Less than 10%	70% but 20% toward Angus
Sunshine? Air clarity (below cloud)	Cloudy or dull; extensively foggy on the hills.	Patches of bright sunshine, particularly toward central belt. Little if any sun and frequent poor visibility Angus. Otherwise visibility very good or excellent.
How Cold? (at 900m) Freezing Level	Around 0C. Will feel as cold as minus 10C directly in the wind. 700 to 1050m; some lower areas may still be partly frozen.	-1C Will feel as cold as minus 11C directly in the wind. 700m.

Planning Outlook

All mountain areas of Britain from Sunday, 23 November, 2025

Another brief burst of cold air on Monday and Tuesday will bring further snow to northern Scotland. By Wednesday, milder air together with rain and strong wind will be extending across Britain. Rain and strong wind will be frequent, particularly on western mountains for the remainder of the week. In Scotland temperatures on the Munros will sometimes be below freezing point, but fresh snow probably transient, whereas elsewhere, snow rare if any.

Forecast issued at 16:12 on Friday, 21 November, 2025

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary.
