General Summary for Tuesday, 25 November, 2025

British Mountain Summary: Based on forecast chart for noon 25 November, 2025

Higher areas, mainly Scottish Highlands frozen, and frost some valleys at first.

Otherwise, benign as from the west the northerly wind drops and snow and hail showers become isolated.

Headline for Southeastern Highlands

Higher areas frozen. Bright sunshine. Wind dropping.

Detailed Forecast for Tuesday, 25 November, 2025

How windy? (On the Munros)	Northerly 20 to perhaps 30mph at dawn, strongest near and east of Glenshee, Will gradually easing through daylight to 10mph and toward dusk backing westerly.		
Effect of wind on you?	Walking arduous at dawn, mainly toward and east of Glenshee, but becoming negligible.		
How wet? (Precipitation and its impact)	Precipitation unlikely Risk of a few brief hail or snow flurries or showers Angus at first.		
Cloud on the hills?	Varied; some higher tops clearing, most remaining in cloud.		
	Generally cloud base 800 to 1200m by late morning, lowest Angus, with most higher summits increasingly clearing.		
Chance of cloud free Munros?	80% by afternoon		
Sunshine? Air clarity (below cloud)	Bright sunshine, unbroken toward central belt. The air very clear so excellent visibility, but fog some valleys and higher slopes.		
How Cold? (at 900m)	-1C		
Freezing Level	750m, rising slowly through day. Some frozen ground lower slopes after frost in valleys.		

MOUNTAIN WEATHER INFORMATION SERVICE

Southeastern Highlands - Looking Ahead

	Wednesday 26 November	Thursday 27 November
How windy? (On the Munros) Effect of wind on you?	Southerly soon 40 to 55mph. May veer more westerly late in day and may ease a little. Some easing through day, but extensively difficult walking where exposed with powerful gusts and considerable wind chill	South to southwesterly, strengthening through day, & quickly with height to widely 55mph where exposed on higher tops. Severe wind chill and walking difficult. Where exposed on higher areas, generally mobility a struggle.
How wet?	Rain; most frequent west of A9	Frequent or constant rain
(Precipitation and its impact)	Rain and drizzle spreading east morning (snow above 700m for a few hours). The rain off and on, most persistent central highlands, but little in total near and east of Glenshee and Ochils.	Rain and drizzle most or all day. Least rain near Angus and Ochils.
Cloud on the hills?	Becoming very extensive	Mountains persistently foggy.
	Some higher slopes initially cloud free. Will gradually deteriorate from as cloud forms above 450 to 600m although toward and east of Glenshee and Ochils; cloud base 600 to 800m.	Persistent cloud from 200 to 450m most mountains. Cloud base 500 to 700m near and north of Lochs Treig, Ossian and Glen Spean Only late in day will there be an improvement.
Chance of cloud free Munros?	Soon dropping to less than 10%	Almost nil
Sunshine? Air clarity (below cloud)	Pockets of weak sun lower slopes near and east of Glenshee; otherwise soon extensively dull and misty.	Rare glimpses of weak sun near/north of Lochs Treig, Ossian and Glen Spean. Visibility widely poor.
How Cold? (at 900m)	-1C rising to 3C through daylight. Will feel as cold as minus 14C directly in the wind.	6C. Will feel as cold as minus 9C directly in the wind.
Freezing Level	750m morning; gradually transitioning to above the summits. Frost many valleys at dawn.	Above the summits.

Planning Outlook

All mountain areas of Britain from Wednesday, 26 November, 2025

A long series of Atlantic lows passing north of or across Britain will bring high rainfall to western mountains together with frequent upland gales (sometimes storm force) and low cloud. Temperatures on higher tops sometimes below freezing point, particularly at the weekend in Scotland, but elsewhere fresh snow transient.

Forecast issued at 12:16 on Monday, 24 November, 2025

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
