### General Summary for Tuesday, 3 February, 2026

#### British Mountain Summary:

#### Based on forecast chart for noon 3 February, 2026

Feeling bitterly cold in gale force easterly winds over the hills. Snow falling to lower slopes, most constant in eastern Scotland with further drifting and whiteout over hills. Snow flurries over the Pennines. Some cloud breaks near west coasts. Rain and increasingly hill snow for Wales, persistent in southeast.

#### Headline for Southeastern Highlands

Gales, gusty. Snow and whiteout.

### Detailed Forecast for Tuesday, 3 February, 2026

<b>How windy? (On the Munros)</b>	Easterly 40 to 55mph, strongest speeds typically central highlands, very gusty in places around higher mountains and on downslopes west of high terrain.
<b>Effect of wind on you?</b>	<b>Challenging walking conditions, more difficult in places, frequent buffeting making balance difficult in places. Significant wind chill, severe highest tops.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Snow most continuous east</b> Frequent to persistent snow fairly widely, but particularly near and east of Glenshee, at times Ochils; snow falling to 200-300m, sleet or rain lower ground, at times a little higher in Callander area. Fresh accumulations toward lower elevations, drifting.
<b>Cloud on the hills?</b>	<b>Extensive</b> Shrouding higher terrain fairly widely, from 600 to 800m east of A9, 800 to 1000m toward Lochs Tay and Rannoch.
<b>Chance of cloud free Munros?</b>	<b>20%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Overcast, dull especially in east. Hazy lower down, whiteout higher areas in snow and cloud.
<b>How Cold? (at 900m)</b>	-3C. Wind chill feeling like -15 to -18C.
<b>Freezing Level</b>	300 to 400m, locally slightly higher on some slopes further west up to 600m.

## Southeastern Highlands - Looking Ahead

	Wednesday 4 February	Thursday 5 February
<b>How windy? (On the Munros)</b>	Easterly 30 to 50mph, very gusty for a time, peak speeds tending to lessen.	East to southeasterly 30 to 45mph, gusty around high tops, locally downslope.
<b>Effect of wind on you?</b>	<b>Challenging conditions with frequent buffeting gusts and significant wind chill, some improvement with time.</b>	<b>Walking strenuous, or arduous in places, frequent buffeting knocking you off balance. Significant wind chill.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Snow continuing, sleet/rain lower down</b> Snow fairly persistent across the hills, most continuous in east; sleet or rain lower slopes, locally varied up to 500m particularly west. Into night, may turn to sleet or rain to some higher elevations.	<b>Snow mostly eastern hills</b> Snow flurries, more frequent or fairly persistent over hills east of the A9, mostly rain below 600-700m, but later snow to lowering elevations in east. Patchier toward west of Loch Tay.
<b>Cloud on the hills?</b>	<b>Extensive</b>  Cloud shrouding many hills from mid slopes upward, highest bases and local breaks possible near and northwest of Loch Tay.	<b>Fairly extensive, lowest east</b>  Shrouding higher terrain widely, lowest on east and southern upslopes, cloud base 600 to 800m, typically higher toward Loch Tay and Rannoch, some breaks mostly on northwest aspects.
<b>Chance of cloud free Munros?</b>	<b>10%</b>	<b>20%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Overcast and dull or misty. Whiteout over tops in fog and snow.	Largely cloudy, some glimpses of sun mainly furthest west. Hazy, often whiteout over higher terrain in cloud and snow.
<b>How Cold? (at 900m)</b>	-2 or -3C, rising slightly during day. Wind chill feeling like -12 to -17C.	0 to -2C, coldest east, later lowering a degree or so from east. Wind chill feeling like -10 to -15C.
<b>Freezing Level</b>	400m to 600m, typically highest further west, locally variable, tending to rise slightly during day and into night.	700 to 900m, lowest furthest east, where tending to drop later toward 500m.

## Planning Outlook

## All mountain areas of Britain from Wednesday, 4 February, 2026

East or southeasterly winds prevail, strong to gale force over many hills for sustained periods this week. Freezing levels will vary, rising briefly during Wednesday from the south, but lowering widely again below 600m during Thursday, tending to lift again over England and Wales on Friday, then possibly rising just above freezing point to higher mountains in Scotland during the weekend, before colder air returns again next week. Further snowfalls mostly over eastern hills in Scotland, occasionally hills in England & Wales, mixed with rain here. Indications of less precipitation and lower wind speeds more often by early next week. Highest cloud breaks generally west & northwest Scotland.

## Forecast issued at 16:15 on Monday, 2 February, 2026

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary.
