General Summary for Tuesday, 10 February, 2026

British Mountain Summary:

Based on forecast chart for noon 10 February, 2026

Windy and significant chill factor for the Highlands - murky and snow falling over the hills most persistent in eastern Scotland, rain below 600m. Better toward northwest, some cloud breaks toward coast. In northern England, lessening wind, patchy rain fading, low cloud rising higher. Drier until later for Wales.

Headline for Southeastern Highlands

Strong, gusty wind. Persistent hill snow and blanket low cloud.

Detailed Forecast for Tuesday, 10 February, 2026

How windy? (On the Munros)	Southeasterly 30 to 40mph.
Effect of wind on you?	Walking increasingly arduous with height: here and there sudden gusts reaching lower slopes northwest of major summits. Significant wind chill.
How wet? (Precipitation and its impact)	Rain and snow frequently Rain, drizzle or above about 600m snow - but wetter higher up toward west, in places rain at times up to 800-900m. Will rarely cease most of region although total precipitation small central highlands.
Cloud on the hills?	Extensive from low levels up Persistent fog above 300 to 450m generally highest central highlands.
Chance of cloud free Munros?	Almost nil
Sunshine? Air clarity (below cloud)	Dull and murky or misty. Difficult navigation where in fog over snow cover and where snow also blows around.
How Cold? (at 900m)	0 or -1C. Will feel near -12C directly in the wind.
Freezing Level	800 to 1000m, highest typically west of the A9.

Southeastern Highlands - Looking Ahead

	Wednesday 11 February	Thursday 12 February
How windy? (On the Munros)	Easterly in the range 30 to 40mph.	East northeasterly 35-50mph.
Effect of wind on you?	Widely arduous or difficult walking and significant wind chill.	Conditions arduous, likely challenging in exposure with severe wind chill. Crouching may be needed for stability at times.
How wet? (Precipitation and its impact)	Snow; probably almost constant Frequent or constant snow much of region, although mostly below 400 to 600m (may lower through the day). Generally lightest and most patchy snow will be near and west of A9.	Early snow mostly clears Morning snow affecting many mountains, slipping south and breaking with time for many dry mountains, though occasional snow spots affect slopes near east lowlands.
Cloud on the hills?	Blanket of fog across the mountains Most hills persistently cloud covered above 400 to 600m - or lower Angus.	Lifting and breaking from north with time Cloud cloaks most high terrain from dawn, bases to middle slopes in the north and east. A breaking trend from the north with time, likely lifting to mostly the high tops as well with regular summit clearings towards central highlands.
Chance of cloud free Munros?	Almost nil	30%, rising to 50%
Sunshine? Air clarity (below cloud)	Overcast, dull or murky. Very poor or appalling visibility in snow.	Sunny breaks increasingly frequent, best central highlands. Very poor visibility in early snow (whiteout over lying snow) but turning excellent where clearing.
How Cold? (at 900m) Freezing Level	0 to -2C: tending to lower from north. Will feel as cold as -15C directly in the wind. Dropping from north to between 500 and 750m.	-4 or -5C. Feeling like -20 to -25C in strongest wind. Frost to glen level fairly widespread from dawn, locally up to 400m near Callander but lowering with time.

Planning Outlook

All mountain areas of Britain from Wednesday, 11 February, 2026

Becoming colder for all areas during this week, with much mountain terrain frozen again to increasingly lower elevations - soonest toward the north and east of Scotland. East to northeasterly winds in the second half of the week, turning northerly toward the weekend - the distribution of snow showers shifting with time from eastern hills to more north-facing mountains, particularly Scotland. Away from showers later in the week, brighter than recently with sunshine and clearer hills.

Forecast issued at 16:07 on Monday, 9 February, 2026
