General Summary for Monday, 27 April, 2026

British Mountain Summary:
Based on forecast chart for noon 27 April, 2026

Morning showers and fog Scottish Highlands, showers trending eastward, heavier afternoon. Dry morning England and Wales, little hill cloud, then heavy afternoon showers, frequent and locally torrential over the Pennines with a risk of lightning. Little wind, but gusty around afternoon showers, deteriorating into night.

Headline for Southeastern Highlands

Early fog lifting; turning showery, risk heavy afternoon

Detailed Forecast for Monday, 27 April, 2026

How windy? (On the Munros)	Variable, generally northerly, 10-15mph, lower speeds at times too. Strong gusts around afternoon showers.
Effect of wind on you?	Fairly small, though occasional inconvenient gusts over high terrain and around afternoon showers.
How wet? (Precipitation and its impact)	Showers and drizzle, some heavy later Showers come and go most of the day, drizzly on the high tops in fog even between showers. Showers will increase in frequency, heavy bursts increasingly likely, particularly Angus and Ochils.
Cloud on the hills?	Variable over high terrain, summit breaks Variable banks at various heights in the morning, bases soon lifting largely to high tops, and regular summit breaks into the afternoon. Where showers occur afternoon, bases return towards 900m.
Chance of cloud free Munros?	70%
Sunshine? Air clarity (below cloud)	Glimpses of sun. Variable visibility, poor in cloud and rain but excellent during breaks.
How Cold? (at 900m)	4C rising to 7C, or 8C central highlands. Suddenly lowering several degrees around showers.
Freezing Level	Above the summits.

Southeastern Highlands - Looking Ahead

	Tuesday 28 April	Wednesday 29 April
How windy? (On the Munros)	Northerly or variable, around 10mph, often lower.	Southeasterly, some variability, 10mph, sometimes less.
Effect of wind on you?	Negligible.	Negligible.
How wet? (Precipitation and its impact)	Any rain unlikely Small chance of odd spots of light rain in the east early in the day, but likely entirely dry.	No rain expected
Cloud on the hills?	Fairly extensive, lifting above summits Fairly extensive from dawn, the fog layer possibly to lower slopes near the eastern lowlands. Lifting through morning and breaking, likely clearing summits through afternoon.	Early low fog lifts, dissipates A fairly extensive layer of low fog from dawn, many summits above the cloud layer, particularly near eastern lowlands, but the fog layer locally thicker, perhaps towards summits. Lifting and dissipating, clear hills by midday.
Chance of cloud free Munros?	30% rising to 80%	Rising to 90%
Sunshine? Air clarity (below cloud)	Patchy sunshine breaking out, more often sunny afternoon.	Extensive sunshine by midday. Excellent visibility.
How Cold? (at 900m)	4C rising to 11C central highlands, cooler towards eastern lowlands, locally 8 or 9C.	8 or 9C.
Freezing Level	Above the summits.	Above the summits.

Planning Outlook**All mountain areas of Britain from Tuesday, 28 April, 2026**

A core of high pressure lingers northeast of Scotland well into the week. The weather will be mostly sunny but also windy, particularly in Wales and the southern Pennines; challenging conditions are likely for several days on high Welsh mountains, powerful gusts over tops and downslope to the west requiring great effort to maintain stability. Despite Monday showers, dry ground conditions, warm temperatures, and wind bring a high risk of wildfire. More settled in Scotland, though breezy in the west, most hill cloud in the east.

Detail becomes uncertain into next weekend, but a rising risk of showers and longer spells of rain as pressure begins to drop.

Forecast issued at 15:58 on Sunday, 26 April, 2026

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary.
