### General Summary for Friday, 14 August, 2026

#### British Mountain Summary:

#### Based on forecast chart for noon 14 August, 2026

A band of rain over central Scotland in the morning sweeps into England and Wales; some heavy bursts with extensive cloud. Rain eases afternoon, to patches over Wales and the Peak District. Drizzle and light rain follows in west Scotland, little reaching eastward where high cloud breaks form.

#### Headline for Southeastern Highlands

Early rain, locally heavy; becoming largely dry, bright breaks

### Detailed Forecast for Friday, 14 August, 2026

|                                                |                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the Munros)</b>              | West-southwesterly 15-20mph, slight northwesterly shift later.                                                                                                                                                                                                                                                                                   |
| <b>Effect of wind on you?</b>                  | Fairly small.                                                                                                                                                                                                                                                                                                                                    |
| <b>How wet? (Precipitation and its impact)</b> | <b>Patchy rain and drizzle, fading</b><br>A band of rain over many mountains in the early hours with local heavy falls, soon breaks into patchy light rain, some drizzle on high western tops. Many hills become largely dry as the day goes with only odd spots of rain from the west.                                                          |
| <b>Cloud on the hills?</b>                     | <b>Rising towards summits, best of clear summits east of A9</b><br>From dawn, may be fairly extensive to middle slopes, locally lower in heaviest rain. Lifting and breaking, bases approaching summit height with breaks off the tops, but returning to around 900m (or lower west) where rain occurs. Eastern tops may be substantially clear. |
| <b>Chance of cloud free Munros?</b>            | <b>Rising to 50%, to 70% near Glenshee</b>                                                                                                                                                                                                                                                                                                       |
| <b>Sunshine?</b><br>Air clarity (below cloud)  | Bursts of sunshine.<br>Excellent visibility where out of cloud and rain.                                                                                                                                                                                                                                                                         |
| <b>How Cold? (at 900m)</b>                     | 13 or 14C, warmest easternmost hills where may rise to 15C; lowering towards 11C later in the day, further lowering into and overnight.                                                                                                                                                                                                          |
| <b>Freezing Level</b>                          | Above the summits.                                                                                                                                                                                                                                                                                                                               |

**All mountain areas of Britain from Saturday, 15 August, 2026**

Though the weekend, high pressure is never far away to the southwest, keeping conditions generally drier and brighter across England and Wales, though a northwesterly flow will bring some cloud to western hills. Scotland is more often cloudy with patchy rain, mostly north and west, and a rising risk of cloud and some bursts of rain more widely into Sunday with fresher air. Windier and wetter conditions are indicated next week, though day-by-day detail is currently uncertain. Monday sees a rising risk of strengthening wind and rain, at least in northern areas, then a blustery northwesterly wind draws fresher air and showers more widely through midweek; some drier, brighter windows to the east. Staying mixed into next weekend.

The Production of the Scottish forecasts is fully funded by sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
