General Summary for Tuesday, 13 October, 2026

British Mountain Summary:

Based on forecast chart for noon 13 October, 2026

Heavy rain over England and Wales at dawn clears eastward, followed by showers, sun breaks, and cooler temperatures. Showers soon frequent west Scotland, clustering for sustained heavy rain/hail, sweeping east across Scotland afternoon. Widely windy, powerful gusts around rain.

Headline for Southeastern Highlands

Early rain clears, afternoon showers, strong wind

Detailed Forecast for Tuesday, 13 October, 2026

How windy? (On the Munros)	West-southwesterly 35-45mph most of the day, will vary and perhaps briefly lighter, but also likely strengthening as afternoon goes, strongest gusts to 50-55mph.
Effect of wind on you?	Arduous walking in exposure much of the day, some locally lighter effects but also a more challenging period later in the day with gusts knocking you around. Significant wind chill.
How wet? (Precipitation and its impact)	Dawn rain, then showers, becoming frequent and heavy Heavy rain from overnight clears away eastwards around dawn, leaving a brief drier window. Showers soon follow from the west, these increasingly frequent and heavy with hail, more extensive afternoon; least rainfall in the east.
Cloud on the hills?	Breaks best in east when dry Varied cloud banks from dawn, perhaps extensive just at dawn from overnight, but for a few hours breaking well toward upper slopes with summits mainly east of A9. Patches more common central tops, filling in more widely again in showers, extensively to middle slopes for a few hours.
Chance of cloud free Munros?	60% east in the morning, lowering to 30%
Sunshine? Air clarity (below cloud)	Patchy sun, best in east in morning, then cloud building, particularly west, and several hours more widely cloudy. Visibility very good as rain clears, then reducing around showers, locally poor.
How Cold? (at 900m)	Mild 10C overnight, dropping as dawn approaches to 7C, lowering further with time to finish the day near 3C. Feeling later like -10C as wind increases.
Freezing Level	Above the summits.

All mountain areas of Britain from Wednesday, 14 October, 2026

Southwesterly gales strengthen to become severe on the mountains into Wednesday, moderating into Thursday. Cloudy with some drizzle on western hills, a band of more extensive heavier rain passing southeastwards Wednesday into Thursday as well. Starting on the milder side, but fresher air arrives behind the band of rain Thursday into Friday, sun breaking out with a few showers - Scottish high summits may drop back close to freezing with some snow falling on higher tops. Indications of higher pressure building on Friday and into the weekend, bringing a window of more settled weather and scope for local inversion conditions on high terrain. Clear night skies allow for chilly mornings, some ground frosts likely, and may remain quite blustery south Pennines and Wales.
