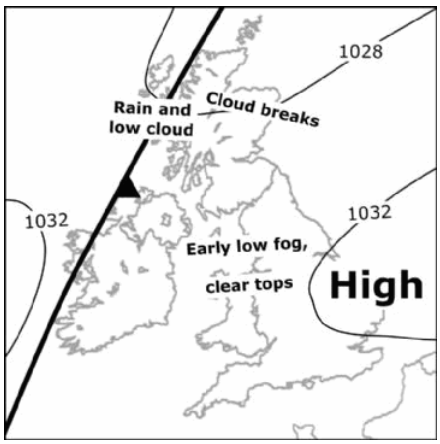
General Summary for Saturday, 31 October, 2026



British Mountain Summary:
Based on forecast chart for noon 31 October, 2026

Rain and low cloud affects the northwestern Highlands much of the day, plus blustery winds on some high terrain. Drier further inland/east in Scotland, best cloud breaks N/E of Cairngorms. England and Wales dry with light winds; morning fog on low ground, but the hills sunny above an inversion.

Headline for Southeastern Highlands

Moderate breeze, low cloud most persistent S/W areas.

Detailed Forecast for Saturday, 31 October, 2026

How windy? (On the Munros)	South to southwesterly 20mph, occasional gusty 25mph.
Effect of wind on you?	**Fairly small, but noticeably breezy on some higher slopes at times.**
How wet? (Precipitation and its impact)	**Local drizzle, a little rain later west** A little fine drizzle around cloud banks, otherwise generally dry all day. Toward evening, some patchy light rain moves in from the west, soonest into western central highlands.
Cloud on the hills?	**Low cloud west, better east** Low cloud from 600-700m most persistent areas west of the A9, whilst further east patchier and higher bases with some breaks occasionally, best east of Glenshee and on north-facing slopes.
Chance of cloud free Munros?	**20% southwest to 40% east.**
Sunshine? Air clarity (below cloud)	Glimpses of sun mostly on north-facing slopes and most often east of A9. Visibility very good out of cloud, some haze toward south.
How Cold? (at 900m)	8C. Feeling near 0C in the wind.
Freezing Level	Above the summits.

Southeastern Highlands - Looking Ahead

	Sunday 1 November	Monday 2 November
How windy? (On the Munros)	Northerly or variable 10 to 15mph or less, possibly 20mph easternmost tops in morning.	Northerly 15 to 25mph, strongest higher tops near and east of Glenshee.
Effect of wind on you?	**Mostly small.**	**Fairly small, but more noticeable and feeling chilly on higher slopes in east.**
How wet? (Precipitation and its impact)	**Dry all day**	**Rain not expected**
Cloud on the hills?	**Low-level fog clears** Fog in glens and some lower hill slopes early in day, patchy cloud may drift upslope locally, but mostly dispersing.	**Varied mostly patches** Patchy cloud banks around some hill slopes, but higher summits may poke out above cloud. Also fog in some glens.
Chance of cloud free Munros?	**80%**	**60%**
Sunshine? Air clarity (below cloud)	Sunshine and patchy cloud. Visibility very good, some early fog in glens.	Patchwork of sun, best toward central belt. Visibility very good, some haze lower down or fog patches in morning.
How Cold? (at 900m)	2 or 3C, small variation with height from glens up early morning, or all day above about 700m.	1 to 3C, little change higher up on Munros. Feeling like -5C in stronger wind.
Freezing Level	Some higher slopes close to freezing, plus patchy frost in some glens early morning.	Above the summits, but patchy frost in glens at first, also some sheltered higher slopes and corries.

Planning Outlook

All mountain areas of Britain from Sunday, 1 November, 2026

High pressure centred over Scotland will persist during early November bringing settled conditions. Generally dry weather, but some areas of misty dampness and regular fog on low ground, some cloud banks on hills but also inversion conditions on high tops, particularly Scotland. Overnight frost in glens will be common, plus some frost pockets for sheltered high terrain, whilst many summits will stay often just above freezing point. Light winds for several days into next week for Scotland, but stronger easterlies are likely for England and particularly Wales which would push cloud banks higher up here during the week ahead.

Forecast issued at 16:00 on Friday, 30 October, 2026
