General Summary for Monday, 9 November, 2026

British Mountain Summary:
Based on forecast chart for noon 9 November, 2026

Many Scottish mountains sunny, but variable areas of low cloud and low-level fog. Murky conditions more widely Pennines and east Wales. No rainfall generally, but dampness in the air locally. Light wind for most places; increasing easterly breeze for Wales.

Headline for Southeastern Highlands

Many hills clear with sunshine, patchy fog or low cloud banks.

Detailed Forecast for Monday, 9 November, 2026

How windy? (On the Munros)	Easterly or variable 10mph or less.
Effect of wind on you?	**Negligible**
How wet? (Precipitation and its impact)	**No rain expected**
Cloud on the hills?	**Some cloud banks and fog in glens; tops may be largely clear** Areas of cloud likely at different heights, plus fog in glens, more extensive low fog toward the lowlands. Some slopes between fog layers; higher tops likely above all cloud much of the time, though some patches may drift over high terrain.
Chance of cloud free Munros?	**70% (above fog in places)**
Sunshine? Air clarity (below cloud)	Sunshine and clear air best across high terrain, but in places sunny at all levels; haze or fog lower down.
How Cold? (at 900m)	1C.
Freezing Level	Near or just below freezing from 1000m upward all day; plus frost in glens early morning.

Southeastern Highlands - Looking Ahead

	Tuesday 10 November	Wednesday 11 November
How windy? (On the Munros)	South-southeasterly 10 to 20mph, strongest on tops in Callander area.	Northerly 10 to 25mph, speed tending to rise during the daytime.
Effect of wind on you?	**Mostly small.**	**Fairly small, but becoming more noticeable and distinctly chilly over high terrain.**
How wet? (Precipitation and its impact)	**Rain not expected**	**Largely dry, risk local snow showers** Substantially dry, but as the day goes on, a risk of a little rain, snow on tops increasingly to 700m, moving in from the north, mostly just patchy showers.
Cloud on the hills?	**Areas of fog, high tops may be clear** Various cloud banks, including some fog on lowest terrain. A deck of cloud may drift around many hills, but higher slopes may remain above much of the cloud / fog.	**Occasional patches** Many mountains often free of cloud. Some patches may drift around higher slopes from time to time.
Chance of cloud free Munros?	**50% (above fog on tops)**	**80%**
Sunshine? Air clarity (below cloud)	Sunshine and hazy high cloud. Visibility excellent, but lower down near the central belt may be foggy or hazy at least.	Mostly sunny, a little patchy cloud. Visibility excellent.
How Cold? (at 900m)	1 or 2C.	0 or +1C. Feeling like -5 to -8C as wind increases.
Freezing Level	Close to freezing on tops above 1000m all day and possibly frost widely in the glens early morning.	900-1050m, tending to lower slightly during day. Also frost many glens in morning.

Planning Outlook

All mountain areas of Britain from Tuesday, 10 November, 2026

Generally dry much of the week ahead in Scotland. Some variable cloud and fog early in the week. A gusty easterly wind for England & Wales and rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting into Wednesday in these areas, but very little extending further north. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800 m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.

Forecast issued at 15:00 on Sunday, 8 November, 2026
