## General Summary for Tuesday, 10 November, 2026

**British Mountain Summary:**
**Based on forecast chart for noon 10 November, 2026**

Much of Scotland dry with sunshine; areas of low-level fog and frost. Some showers toward the far north. Fog from lower elevations upward for Pennines and east Wales, but much of northwest Wales and the Lakes have clearer hills. Rain moves into south Wales. Strong easterly winds for Wales.

**Headline for Southeastern Highlands**

Mountains mostly clear, sky may be overcast; light wind.

## Detailed Forecast for Tuesday, 10 November, 2026

| | |
|---|---|
| **How windy? (On the Munros)** | Variable direction 10mph or less.<br>Toward dusk, tending northeasterly 10-15mph. |
| **Effect of wind on you?** | **Negligible.** |
| **How wet?** (Precipitation and its impact) | **Rain not expected** |
| **Cloud on the hills?** | **Mostly little if any**<br>Some fog lower terrain and odd patches of cloud over the tops, but many mountains substantially clear. |
| **Chance of cloud free Munros?** | **80%** |
| **Sunshine?** Air clarity (below cloud) | Weak sun through hazy high cloud, perhaps more overcast skies.<br>Visibility excellent, but lower down near the central belt may be foggy or hazy at least. |
| **How Cold? (at 900m)** | 1 or 2C. |
| **Freezing Level** | Close to freezing on tops above 1000m all day and frost in many glens early morning. |

**Southeastern Highlands - Looking Ahead**

| | Wednesday 11 November | Thursday 12 November |
|---|---|---|
| **How windy? (On the Munros)** | Northerly 10 to 20mph, speed tending to rise during the daytime, later 25mph toward dusk. Risk 40mph+ into night. | Northerly 30 to 45mph, strongest higher eastern mountains. |
| **Effect of wind on you?** | **Fairly small, but becoming more noticeable later and distinctly chilly over high terrain.** | **Strenuous walking high terrain, more arduous eastern tops, frequent buffeting. Significant wind chill; severe east tops.** |
| **How wet?** (Precipitation and its impact) | **Dry until late, then some snow showers**<br>Dry most of daylight, then toward or soon after sunset, a band of showery snow on tops increasingly to 700m, moving in from the north, fading to just patchy showers into evening. | **Rare flurries**<br>A few brief snow showers mostly areas toward Lochnagar, but much of the region substantially dry. |
| **Cloud on the hills?** | **Occasional patches**<br>Many mountains often free of cloud. Some patches may drift around higher slopes from time to time. | **Mostly little**<br>Occasional patches may drift in from the north to cap higher slopes from time to time, but most tops toward the south often clear all day. |
| **Chance of cloud free Munros?** | **80%** | **80%** |
| **Sunshine?** Air clarity (below cloud) | Mostly sunny, a little patchy cloud. Visibility excellent. | Mostly sunny. Visibility excellent. |
| **How Cold? (at 900m)** | 0 or +1C, dropping to -2C into evening. Feeling like -5C as wind increases. | -1 or -2C. Feeling like -12 to -17C directly in the wind, coldest toward east. |
| **Freezing Level** | 900-1050m, tending to lower slightly during day. Also frost many glens in morning. | 700-800m. Frost widely in glens in morning, all day out of sunlight. |

## Planning Outlook

**All mountain areas of Britain from Wednesday, 11 November, 2026**

Dropping colder across all mountains during midweek as the wind shifts northerly and strengthens. Some showery snowfall across the Highlands on Wednesday, otherwise plenty of sunshine and very clear air late this week, for all areas - clearing away fog from early in the week. Into the weekend, as the wind shifts west then southwesterly, less cold air drifts in from the Atlantic bringing more cloud onto western hills - an increasing risk of rain in the west. A changeable outlook into next week with varying temperatures, stronger wind at times, rain and some upland snow possible. Unsettled patterns are more likely to prevail beyond mid-month.
