General Summary for Thursday, 12 November, 2026

British Mountain Summary:
Based on forecast chart for noon 12 November, 2026

Low freezing level in briefly very cold northerly wind: widely gale force Scottish Highlands. A little less windy south into N England and Wales. Hail and snow showers northern and coastal NW Highlands, a few flurries elsewhere, albeit much of upland Britain fine and sunny.

Headline for Southeastern Highlands

Upland gales only slowly easing. Snow and hail flurries.

Detailed Forecast for Thursday, 12 November, 2026

How windy? (On the Munros)	Northerly 40 to 50mph post dawn easing slowly through daylight to 30 to 40mph.
Effect of wind on you?	**Strenuous walking high terrain, more arduous eastern tops, frequent buffeting. Significant wind chill.**
How wet? (Precipitation and its impact)	**Rare flurries** Isolated brief snow flurries, but more frequent east from Glenshee.
Cloud on the hills?	**Mostly little** Occasional patches may drift in from the north to cap higher slopes from time to time, but most tops toward the south often clear all day.
Chance of cloud free Munros?	**80%**
Sunshine? Air clarity (below cloud)	Bright sunshine. Visibility excellent.
How Cold? (at 900m)	-2C. Feeling like -12 to -17C directly in the wind, coldest toward east.
Freezing Level	600m. Frost widely in glens in morning, all day out of sunlight.

Southeastern Highlands - Looking Ahead

	Friday 13 November	Saturday 14 November
How windy? (On the Munros)	Westerly, 20 to 25mph, at times may reach 30mph eastern tops early in day.	West or southwesterly between 30 and 40mph.
Effect of wind on you?	**Fairly small, but on some exposed tops may start to affect ease of walking, with marked wind chill.**	**Increasing buffeting and wind chill becoming considerable with increasing height. Expect balance sometimes to be difficult.**
How wet? (Precipitation and its impact)	**Substantially or completely dry** Chance of an odd local snow flurry, but most of the day dry.	**Rain or snow now and again** Occasional now and again (rain lowest slopes, later below 600 or 700m). Total rainfall small and areas south of about Loch Tay and near and east of Glenshee largely dry.
Cloud on the hills?	**Mostly very little** Local patches may drift onto some upper slopes, greater risk toward the central highlands in the afternoon.	**Most higher mountains foggy. Cloud base highest toward Glenshee.** Cloud base typically 650 to 900m. Toward and east of Glenshee and Ochlls, cloud base mostly above the summits.
Chance of cloud free Munros?	**80%**	**20%**
Sunshine? Air clarity (below cloud)	Occasional sunshine, best toward the lowlands. Visibility excellent.	Sunshine now and again, perhaps sunshine extensive for periods toward central belt and near and east of Glenshee. Mostly good visibility but poor in precipitation.
How Cold? (at 900m)	-2C. Wind chill feeling like -10C.	-2C. Will feel as cold as minus 13C directly in the wind.
Freezing Level	Much terrain frozen from dawn with frost all day out of sunlight.	Most terrain initially frozen; thawing starting lower slopes as freezing level rises toward 700m, perhaps 1000m near central belt.

Planning Outlook

All mountain areas of Britain from Friday, 13 November, 2026

The present extensively dry and often relatively windless weather will end over the next few days as low pressure envelopes Britain. Showery conditions (snow on higher areas) will arrive on western mountains (mainly W & NW Scotland) on Saturday, before the threat of widespread rain - or snow higher areas of the Highlands - on Sunday. There may also be upland gales (although as yet considerable uncertainty for Sunday). Next week, frequent precipitation, low cloud and bouts of upland gales.

Forecast issued at 7:40 on Thursday, 12 November, 2026
