Southeastern Highlands

The southern Highlands as far west as the Callander area and north to Loch Ericht, Drumochter and summits near Glenshee ski-centre (summits within the historic county of Perthshire). Also Ochils and Angus hills.

General Summary for Monday, 23 November, 2026

British Mountain Summary:
Based on forecast chart for noon 23 November, 2026

A largely fine day but a chilly southeasterly breeze - windier near west coasts. Sunniest northern Scotland. Remnants of a front toward west - some patchy cloud on southern hill groups in Scotland; some lower fog / cloud banks south Wales. Deteriorating from southwest into night.

Headline for Southeastern Highlands

Patchy cloud on tops, but dry; moderate breeze.

Detailed Forecast for Monday, 23 November, 2026

How windy? (On the Munros)	Southeasterly 20mph, perhaps 15mph Angus and Ochils, but tending to rise from the west, later 25-30mph central tops. Will strengthen into night to reach 40-50mph.
Effect of wind on you?	**Fairly small, but some more notable gusts and marked wind chill develop over higher central mountains.** **Deteriorating into the night.**
How wet? (Precipitation and its impact)	**Precipitation not expected**
Cloud on the hills?	**Varying patches** Banks of cloud likely to come and go over some hill slopes, base 700 to 900m.
Chance of cloud free Munros?	**60%**
Sunshine? Air clarity (below cloud)	Patchy sunshine and very good visibility.
How Cold? (at 900m)	-1C Will feel as cold as minus 6C in the wind.
Freezing Level	800m. Lower areas partly frozen after a frost sheltered glens.

Southeastern Highlands - Looking Ahead

	Tuesday 24 November	Wednesday 25 November
How windy? (On the Munros)	South to southeasterly, strengthening quickly with height a very gusty 40-55mph. Ferocious gusts; some reaching valleys.	Southeasterly 20 to 30mph, likely strongest in the morning and toward more eastern hill groups, where locally gusty.
Effect of wind on you?	**Severe wind chill and very difficult walking where exposed. Gusts may well knock you over - even on some lower slopes.**	**Starting to affect ease of walking in places with considerable wind chill, in places gusts may feel more noticeable for periods.**
How wet? (Precipitation and its impact)	**Snow frequent or persistent all day** Periods of snow possibly from early morning, varying in extent and intensity, may fade for a time, then set in again from the southwest; risk snowfalls on some hills all day with whiteout higher up. Rain lowest slopes.	**Snow flurries fading** Remnants of overnight light snow may continue to affect some central hills into the morning, but likely to fade to just patchy flurries of sleet or snow with time.
Cloud on the hills?	**Very extensive and low** Cloud base soon widely to or below 500m, shrouding the hills all day.	**Persistent most hills** A sheet of cloud likely to cover much of the region, some cloud banks from lower slopes upward in places. Local breaks may form between cloud layers near Loch Tay.
Chance of cloud free Munros?	**10%**	**10%**
Sunshine? Air clarity (below cloud)	Dull and misty with visibility very poor or appalling in precipitation.	Little if any weak sun due to layers of high cloud. Visibility very good where dry, poorer in early snow.
How Cold? (at 900m)	-2C. Will feel as cold as minus 15C in the wind.	Around 0C, locally varied just above or below freezing; small variation with height. Feeling like -10C if in stronger wind.
Freezing Level	Varying between 450 to 700m.	Poorly defined with much upland terrain partly frozen above 600m, but also frost in many glens in the morning.

Planning Outlook

All mountain areas of Britain from Tuesday, 24 November, 2026

Staying near or below freezing across most mountains with below-average temperatures for late November, much higher terrain persistently frozen and regular frosts into valleys and glens. Some rain, sleet and hill snow on Tuesday as a front drifts in from the west, but then fizzles out into Wednesday. East or southeasterly winds prevail into midweek and beyond, with snow flurries focused on more southeastern hill groups in the Highlands, at times the Borders and Pennine areas. In the extended outlook toward next weekend and beyond, there is uncertainty about the extent of incoming Atlantic fronts and scope for further snowfalls, or any pushes of milder air trying to arrive. A more 'blocked' chillier easterly driven weather regime may well prevail into early December.
