Headline for Southern Uplands

Low cloud lifting and clearing. Fairly light wind.

Detailed Forecast for Thursday, 24 April, 2025

How windy? (On the summits)	East to southeasterly 10-15mph, strengthening later in west to 20mph, or from dusk into night 25-30mph Galloway hills.
Effect of wind on you?	Mostly small during daytime; later starting to feel more blustery on western tops.
How wet? (Precipitation and its impact)	Rain unlikely Possible fine drizzle in cloud.
Cloud on the hills?	Mostly east in morning, lifting and clearing Cloud widespread morning above about 450m, although the cloud often well broken Galloway. Late morning or midday will progressively break up: very little left into the afternoon.
Chance of cloud free summits?	30%, rising to almost certain
Sunshine? Air clarity (below cloud)	Cloud breaking from west to give periods of sunshine. Misty start eastern hills; visibility then excellent.
How Cold? (at 750m)	3C rising to 6C Cheviots, 8C Galloway.
Freezing Level	Above the summits, but slight frost some sheltered higher and lower slopes at dawn.

All mountain areas of Britain from Friday, 25 April, 2025

Weak fronts will encroach from the Atlantic by Friday into the weekend, bringing more humid air, with low cloud and patchy rain or drizzle, local showery bursts. Possibility of more persistent rain in western Scotland by Sunday with stronger southwesterly winds for a time. Generally mild, or increasingly warm into early next week as southerly air prevails. High pressure rebuilding with a good deal of dry and sunny weather expected next week into the start of May.

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service. 2025.
