British Mountain Summary:

Based on forecast chart for noon 11 February, 2025

Windy and cold with most mountain terrain frozen. Snow will accumulate slowly over many eastern mountains although rain lower slopes Scottish Borders southwards. A few flurries will reach western mountains, where in places cloud will break to give a little sunshine.

Headline for Yorkshire Dales & North Pennines

Snow on and off. Higher terrain frozen.

Detailed Forecast for Tuesday, 11 February, 2025

How windy? (On the summits)	Easterly; speeds very varied, typically 30mph, but 35, locally 50mph N Pennines where exposed in sudden gusts.
Effect of wind on you?	Considerable wind chill and sometimes sudden buffeting in gusts on both higher and some lower slopes (particularly west of Cross Fell).
How wet? (Precipitation and its impact)	Snow on and off; slowly accumulating particularly eastern Pennines Sleet and above 400m snow on and off, slowly accumulating, although rarely heavy. Least snow westernmost dales. Light rain valleys.
Cloud on the hills?	Persistently shrouding the hills Persistent fog higher areas; the cloud base 300m near precipitation, but intermittently 450m and perhaps a little higher westernmost slopes.
Chance of cloud free summits?	Less than 10%
Sunshine? Air clarity (below cloud)	Sunshine unlikely. Mostly good visibility although a haze.
How Cold? (at 700m)	-1C. Will feel as cold as minus 10C due to wind chill.
And in the valleys	Around 4 or 5C in the afternoon.

	Wednesday 12 February	Thursday 13 February
How windy? (On the summits)	Easterly 15 to 20mph, but on higher areas locally 25mph.	Southeasterly, typically 25mph. In places a very gusty 30 or west of Cross Fell 35mph.
Effect of wind on you?	Mostly fairly small.	Will impede ease of walking on most higher areas. In places strong gusts will unbalance you. Notable wind chill.
How wet? (Precipitation and its impact)	Snow flurries Occasional snow showers or mostly flurries - light rain below 300m.	A few snow flurries A few snow flurries.
Cloud on the hills?	Extensive on higher summits Cloud base typically 450 to 600m; generally highest western hills.	Clearing most summits: highest summits probably not clearing Cloud base typically 600 to perhaps 750m.
Chance of cloud free summits?	30%	60%
Sunshine? Air clarity (below cloud)	A few glimpses of sun only. Good visibility but a haze.	Occasional sun, mainly more western dales. Good visibility although a haze.
How Cold? (at 700m)	-1C	-2C. Due to wind chill will feel around -9C.
And in the valleys	Will reach around 5C in the afternoon.	Will reach 3 or 4C in the afternoon.

Planning Outlook

All mountain areas of Britain from Wednesday, 12 February, 2025

Remaining cold with nearly all mountain terrain frozen for the next week or perhaps longer. Total precipitation will be small, although one or two further periods where snow showers or flurries will reach mainly eastern mountains, whilst occasionally winds strengthen and a threat of precipitation on western mountains as Atlantic fronts temporarily make progress toward western Britain.
