Full day weather skills course - see mwis.org.uk/information/day-with-mwis for info and booking

General Summary for Sunday, 11 May, 2025

British Mountain Summary:

Based on forecast chart for noon 11 May, 2025

Showers develop inland western Scotland, heavy bursts or thunderstorms possible northwest later. Chance spots of rain south Scotland and north England, though mostly sunny. Modest winds here, some increase after dusk. Bursts of showery rain south Wales, chance localised thunderstorms later; some drift into north Wales.

Headline for Yorkshire Dales & North Pennines

Mostly sunny and warm; an evening breeze

Detailed Forecast for Sunday, 11 May, 2025

How windy? (On the summits)	Southeasterly 15-20mph. A modest increase around dusk, up to 25mph.
Effect of wind on you?	Fairly small, some uncomfortable winds pick up around dusk.
How wet? (Precipitation and its impact)	No rain
Cloud on the hills?	Not expected
Chance of cloud free summits?	Nearly certain
Sunshine? Air clarity (below cloud)	Sunny, some thin high cloud around. Scattered fair weather cloud builds after noon. Visibility excellent after early haze clears.
How Cold? (at 700m)	10C rising to 15C. Locally warmer spots on western slopes.
And in the valleys	6C at dawn, cooler in sheltered areas, particularly eastern slopes. rising to 18 to 20C.

Yorkshire Dales & North Pennines - Looking Ahead

	Monday 12 May	Tuesday 13 May
How windy? (On the summits) Effect of wind on you?	Easterly, 20-25mph. Notable gusts over high terrain early. Stronger breezes later, up to 30mph south Dales. Walking just starting to be impeded, gusts may briefly challenge stability as dusk approaches.	Easterly 20-25mph. Notable gusts over fell tops and downslope in the west in the morning and evening. Walking just starting to be impeded, some gusts may briefly challenge stability.
How wet? (Precipitation and its impact)	Little if any Spots of rain may develop, though likely amounting to little.	No rain expected
Cloud on the hills?	Little or none after morning sea fog Blanket of sea fog onto lowest eastern slopes of North Pennines, more patchy in eastern Dales. Some fog banks drift upslope to high tops, clearing through morning. Some bases may briefly return to the highest tops if rain develops.	Dawn sea fog east soon dissipates Banks of sea fog on eastern slopes at dawn, occasionally slipping upslope towards high tops. Possibly more extensive fog around north Pennines. Fading to cloud-free by noon.
Chance of cloud free summits?	90%	Becoming above 90%
Sunshine? Air clarity (below cloud)	Frequent sun, scattered fair weather cloud around. Good visibility, some haze east.	Widely sunny after fog fades. Excellent visibility though some haze at first.
How Cold? (at 700m) And in the valleys	10 or 11C, rising to 15C. Easternmost slopes may see little rise through the day. 6C at dawn, some locally cooler sheltered valleys. Rising to 18C.	8C, rising to 13C. Less temperature rise on eastern slopes, staying near 11C. 4C at dawn, rising to 18C. Always warmer west of high terrain, reaching near 20C.

Planning Outlook**All mountain areas of Britain from Monday, 12 May, 2025**

Lingering bursts of rain in Wales early next week will gradually fade as low pressure slips away. Only odd spots of rain in northwest England and west Scotland, soon fading. A continental wind track and high pressure to the east will keep most cloud above the summits next week, with eastern areas often sunny. Settled conditions prevail midweek into next weekend as high pressure reestablishes just north of the British Isles. A mix of cloud and sun with light winds, generally easterly though variable with little change day to day. Slight frosts at dawn in sheltered spots, mostly warm by day. Very dry ground conditions, beware high risk of fire.

Forecast issued at 16:23 on Saturday, 10 May, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
