General Summary for Thursday, 7 August, 2025

British Mountain Summary:

Based on forecast chart for noon 7 August, 2025

Gale-force winds across higher mountains in Scotland all day; windy on tops for England and Wales, strongest in morning. Early rain clears southeastwards, leaving scattered showery rain but many places often dry. Cloud bases generally rising, though often covering west coastal mountains in Scotland.

Headline for Yorkshire Dales & North Pennines

Windy, strongest early in day. Soon largely dry, cloud lifting.

Detailed Forecast for Thursday, 7 August, 2025

How windy? (On the summits)	West-southwesterly 30 to 35mph morning, up to 40mph highest tops at first. Tending to ease toward 25mph by middle of day.
Effect of wind on you?	Walking often strenuous with considerable wind chill at first. Tending to lessen though staying blustery over tops.
How wet? (Precipitation and its impact)	Rain clearing Overnight showery rain lingers through dawn, soon clearing from the northwest to be often dry, rare brief showers.
Cloud on the hills?	Early low cloud substantially clears From dawn: fog extensively above 600m, forming on lower slopes western dales south of Tebay. Will improve markedly during morning as most or all fells clear. Patches reforming some western slopes evening.
Chance of cloud free summits?	Rising to 90% by late morning
Sunshine? Air clarity (below cloud)	Dull and misty start, soon patches of sunshine and very good visibility; some haze.
How Cold? (at 700m)	12C. Will feel near freezing point directly in the wind in morning, around 5C afternoon.
And in the valleys	11C from dawn, rising to 17 to 19C in the afternoon.

All mountain areas of Britain from Friday, 8 August, 2025

A mixed southwesterly weather pattern prevails. Often windy, especially Scotland. Fronts coming in from the Atlantic bringing periods of rain most frequently in west and northwest Scotland - wettest here around Friday night into early Saturday. Small amounts of rain reaching eastern Scotland, more often dry. Patchier and less frequent rain for western England and Wales - higher pressure building for periods to give drier and warmer weather here. Low cloud often shrouding western tops, sometimes to lower elevations near coasts, higher cloud bases eastwards with better breaks.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
