Indoor-outdoor weather skills course - see [mwis.org.uk/information/day-with-mwis](http://www.mwis.org.uk/information/day-with-mwis) for info & booking

General Summary for Sunday, 9 November, 2025

British Mountain Summary:

Based on forecast chart for noon 9 November, 2025

A swathe of rain advances eastwards across all regions during the day, heaviest over south-facing hill groups, patchier northwards across the Highlands, breaking up with time in the west, leaving a few showers, rising cloud bases. Windy, up to gale force high tops, most sustained in Wales.

Headline for Yorkshire Dales & North Pennines

Wind strengthening, becoming wetter into middle of day.

Detailed Forecast for Sunday, 9 November, 2025

How windy? (On the summits)	Southwesterly 25-30mph. Rising during morning, reaching up to 40mph middle of day, some stronger gusts over high tops. Starting to lessen a little toward evening.
Effect of wind on you?	Walking increasingly arduous with wind chill. Considerable buffeting will make stability challenging.
How wet? (Precipitation and its impact)	Patchy rain increasingly frequent, heavy west A few spots of nuisance rain early morning in west, becoming more frequent into middle of day, setting in for periods with some heavy bursts western Yorks Dales. Patchier rain toward northeast Pennines.
Cloud on the hills?	Becoming extensive over high terrain From dawn, banks of cloud drifting over high fells of Yorks Dales, more patchy over N Pennines; local breaks are likely. With time, banks become more frequent and bases will lower to middle slopes as rain arrives.
Chance of cloud free summits?	70% early morning, lowering to 20%
Sunshine? Air clarity (below cloud)	Weak sun through high cloud at first in east, trending overcast Very good visibility in morning in east, becoming poor as rain arrives.
How Cold? (at 700m)	7 or 8C. Feeling like -3C directly in the wind.
And in the valleys	7C from dawn, rising to 11C.

All mountain areas of Britain from Monday, 10 November, 2025

A cloudy and wet week ahead as several low pressure cores draw frontal systems across the British Isles. Rain at times extensive and heavy, streams in spate with a risk of flooding, primarily western mountains. Winds start fairly light but soon increase with gales becoming widespread by Tuesday, which may persist for several days. Temperatures remain mild until later in the week when cold air begins pushing into northern Scotland - timing and extent of the arrival of cold air remains uncertain but high terrain of Scotland and possibly northern England may start to see more snow around or after next weekend.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
