Indoor-outdoor weather skills course - see mwis.org.uk/information/day-with-mwis for info & booking

General Summary for Wednesday, 12 November, 2025

British Mountain Summary: Based on forecast chart for noon 12 November, 2025

Northern areas of the Highlands generally wet, the rain only gradually breaking up. Showers for the southwest Highlands. Dropping below freezing on northern tops later. Heavy rain sets in again across Wales, already flooding expected after previous rain. Mostly dry for much of Pennines, Lakes & south Scotland.

Headline for Yorkshire Dales & North Pennines

Windy early morning, easing. Largely dry, lowest cloud west.

Detailed Forecast for Wednesday, 12 November, 2025

How windy? (On the summits) Effect of wind on you?	Southwesterly 30-35mph or stronger before dawn, easing gradually to 20mph, or less during afternoon, turning southerly. Increasing into night to gales 40-50mph. Blustery, affecting comfortable walking on higher areas in the morning, tending to lessen during daytime. Deteriorating again into night.
How wet? (Precipitation and its impact)	Local light rain briefly, more rain by evening; local flooding Wet underfoot with fast-flowing streams, some flooding following previous rain. Pockets of light showery rain possible western Dales in morning, but much of daytime substantially dry. Evening onward, further heavy rain moving in from the south.
Cloud on the hills? Chance of cloud free summits?	Most persistent western dales Banks of cloud from lower elevations upward in the morning, remaining most persistent over western areas up to Tebay. Some breaks forming northern areas. 20% W Dales, to 40% NE Pennines.
Sunshine? Air clarity (below cloud)	Mostly cloudy, some weak sun, best toward east. Misty areas may linger western Dales, but some good visibility.
How Cold? (at 700m) And in the valleys	8 or 9C. Feeling like 0C or below if in stronger wind. Little change around 10 or 11C night and day.

All mountain areas of Britain from Thursday, 13 November, 2025

High rainfall totals bring concerns for flooding again, risk more significant in Wales in the days ahead. A marked contrast of temperature north to south this week, but colder air to the north becomes more widespread into the weekend and early next week, leaving higher terrain below freezing for a run of days and some accumulating snow, mostly focused over northern Scottish mountains. Wind will vary, then become east-northeasterlies, gales Friday into Saturday, then a possible brief lull before turning northerly on Sunday. More uncertain outlook further into next week, but some further unsettled areas of low pressure currently show signs of remaining nearby - but often within a colder weather regime.

Forecast issued at 16:27 on Tuesday, 11 November, 2025
