

# Yorkshire Dales & North Pennines

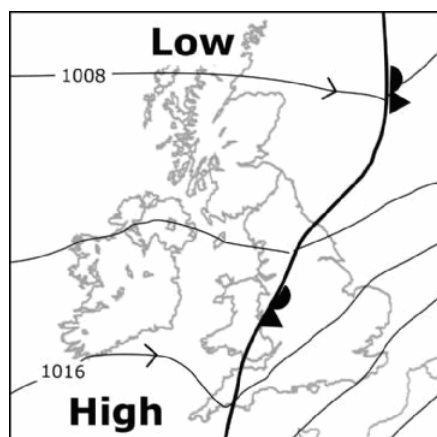

The entire Yorkshire Dales National Park and North Pennines AONB, including the Three Peaks and Cross Fell, plus Howgills, also south to Forest of Bowland.

**MWIS Wild Weekend - Ambleside - 25-26 October**

**Indoor-outdoor weather skills course - see [mwis.org.uk/information/day-with-mwis](http://mwis.org.uk/information/day-with-mwis) for info & booking**

## General Summary for Saturday, 22 November, 2025

### British Mountain Summary:

#### Based on forecast chart for noon 22 November, 2025

As less cold air penetrates the UK, only higher summits in Scotland will remain below freezing point. Nevertheless, much mountains terrain will remain frozen and icy. Rain and strong winds overnight will have eased to in Scotland and through the morning will clear Wales and N England.

### Headline for Yorkshire Dales & North Pennines

Rain morning. Fog tending to thin. Terrain partly frozen.

## Detailed Forecast for Saturday, 22 November, 2025

|                                                   |                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Southwesterly 30-40mph post dawn.<br>Will veer westerly 20 to on higher tops 25mph.                                                                                                                                                                                                                                   |
| <b>Effect of wind on you?</b>                     | Soon small.                                                                                                                                                                                                                                                                                                           |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Risk of showers</b><br>Remnants of overnight rain clearing to well scattered showers at or an hour or so after dawn N Pennines and by mid morning Yorkshire dales.                                                                                                                                                 |
| <b>Cloud on the hills?</b>                        | <b>Very varied: extensive fog, tending to this slowly through the day.</b><br>Very varied; overall most hills cloud covered, in some areas from just above valleys up.<br>Nevertheless, will improve, by afternoon most cloud above 550m, with breaks to higher tops - although in places fog may persist lower down. |
| <b>Chance of cloud free summits?</b>              | <b>10% rising to 50%</b>                                                                                                                                                                                                                                                                                              |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Occasional sun gradually coming through, particularly lower slopes N Pennines.<br>Misty or foggy widely morning; visibility gradually becoming good below cloud.                                                                                                                                                      |
| <b>How Cold? (at 700m)</b>                        | 2 or 3C.<br>Feeling like -5C where exposed to the wind.                                                                                                                                                                                                                                                               |
| <b>And in the valleys</b>                         | Will rise to around 4C - but expect patches of still frozen terrain.                                                                                                                                                                                                                                                  |

|                                                   | Sunday 23 November                                                                                                                                                                  | Monday 24 November                                                                                                                                                                                                         |
|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Low confidence in area of low pressure: Direction may vary; sometimes below 20mph. Risk abruptly westerly 30-40mph.                                                                 | Northerly, between 25 and on higher fells 35mph.                                                                                                                                                                           |
| <b>Effect of wind on you?</b>                     | <b>Expect changing conditions, sometimes or mostly small, but beware of more challenging walking and considerable wind chill.</b>                                                   | <b>Walking often arduous, particularly near precipitation, where in gusty conditions, balance tricky.</b>                                                                                                                  |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Frequent or persistent rain, risk sleet</b><br>Areas of persistent rain circulating within low pressure, may set in for several hours. May sometimes turn to sleet higher fells. | <b>Little or perhaps no precipitation</b><br>There may be light rain, or above 700m sleet now and again, most likely morning. There is also risk that showers over the North Sea penetrate as far as the eastern Pennines. |
| <b>Cloud on the hills?</b>                        | <b>Very extensive</b><br><br>Persistent fog most mountains, widely above 400 to 600m, and sometimes covering lower slopes.                                                          | <b>Mostly clearing</b><br><br>Nearly all fells are likely to clear, although in the morning cloud extensively shrouding higher fells.<br>Gradually most summits clearing - may come and go above 700m.                     |
| <b>Chance of cloud free summits?</b>              | <b>10%</b>                                                                                                                                                                          | <b>70% by afternoon</b>                                                                                                                                                                                                    |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Cloudy or dull; extensively foggy on the hills.                                                                                                                                     | Patches of bright sunshine gradually coming through.<br>Visibility very good or perhaps in afternoon excellent.                                                                                                            |
| <b>How Cold? (at 700m)</b>                        | 0C.<br>Risk feeling like -10C in stronger wind.                                                                                                                                     | Around 1C - a marginal drop likely through the day<br>Will feel as cold as minus 8C directly in the                                                                                                                        |
| <b>And in the valleys</b>                         | 3 to 6C, warmest Yorkshire.                                                                                                                                                         | Will reach 5 to 7C early afternoon.                                                                                                                                                                                        |

## Planning Outlook

**All mountain areas of Britain from Sunday, 23 November, 2025**

Another brief burst of cold air on Monday and Tuesday will bring further snow to northern Scotland . By Wednesday, milder air together with rain and strong wind will be extending across Britain. Rain and strong wind will be frequent, particularly on western mountains for the remainder of the week. In Scotland temperatures on the Munros will sometimes be below freezing point, but fresh snow probably transient, whereas elsewhere, snow rare if any.

**Forecast issued at 16:11 on Friday, 21 November, 2025**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
